Summary

Full Stack Software Engineer with experience in scalable backend systems, AI-driven applications, and performance optimization using Python, React, and cloud platforms.

Education

University Of Illinois Urbana-Champaign, Illinois, USA

Aug 2023 – Dec 2024

Masters Of Computer Science

3.8/4.0 GPA

SCTR'S Pune Institute Of Computer Technology, Pune, India

Aug 2019 – Jun 2023

Bachelor of Engineering in Computer Engineering

8.79/10.0 CGPA

Technical Skills

Languages: Python, C++, JavaScript, TypeScript

Frameworks: React, Node.js, Express

Databases: PostgreSQL, MySQL

Cloud & Tools: AWS, GCP, Docker, Git

Core Technical Skills: Data Structures Algorithms, System Design, Distributed Systems, REST APIs, Cloud Computing, Agentic AI

Experience

Altisec Technologies | AI Intern

Mar 2026 – Current

- **Architected Viz360**, an **AI-enabled SOC platform** on **GCP**, centralizing incident monitoring, investigation, ticketing, and security operations through **workflow automation** and role-based dashboards.
- Customized **Cortex XSIAM agents** by defining **prompts, behavioral instructions, contextual inputs**, and structured output schemas to **automate security investigation** and response workflows.
- Designed and implemented **agentic AI** workflows using **blackboard architecture** to automate **incident response** across **distributed systems**, improving operational efficiency by 30%.

Saayam for All | Software Developer

Mar 2025 – Feb 2026

- Engineered **Python-based data access** logic and **optimized PostgreSQL queries** across **core relational tables**, reducing query execution time by 35% and improving backend data reliability.
- Introduced a “Save Progress” feature by persisting form state through **Python backend logic and relational tables**, reducing form abandonment by 18%.
- Elevated **React application responsiveness** through component restructuring and UI refactoring, **reducing interaction latency** by 25%.

Sarvatra E-labs Technologies | Intern

Dec 2021 – Mar 2022

- Transformed **Java programs into GraalVM native binaries**, improving startup performance and enabling seamless **cross-platform execution** while resolving 15+ environment inconsistencies.
- Engineered **Java and scripting utilities** to simplify **testing workflows**, **reducing configuration errors** by 35% and improving build reliability.

Projects

CodeIntel | FastAPI, React, Multi-Agent AI, SQLite

- * Orchestrated a **multi-agent code intelligence** platform that **analyzes repositories**, extracts code structures, and **generates architecture**, documentation, and refactoring insights.
- * Crafted an interactive developer workspace with **AI-powered code chat**, architecture visualization, and codebase navigation, **accelerating repository understanding** and developer onboarding.

Prism | MERN

- * Improved real-time collaboration by developing a **MERN Stack** coding interface, **reducing workflow fragmentation** by 50% and **enhancing platform stability** with dynamic rendering pipelines.
- * Streamlined team interactions by implementing **event-driven synchronization**, decreasing context switching by 30% and supporting multi-user concurrency.

Real-World Bug Analysis Suite | Python, Fault Localization, Code Coverage

- * **Automated test generation and bug analysis** across 3 industry-standard defect benchmarks (Defects4J, BugSwarm, and Bears), enabling systematic evaluation of real-world software failures.
- * Evaluated **fault localization** and code coverage metrics across **multiple open-source projects**, uncovering recurring reliability patterns through **automated analysis and visualization pipelines**.
